PROJECT

Agenda-setting <ul style="list-style-type: none">• Embedded multi-lingual news articles with sentence-bert neural network and ridge regression.• Extracted name entities with Spacy and Polyglot; bridged multilingual name entities through Wikipedia concepts.• Query, filter, and refine similar news article pairs based on classifiers with similarity evaluation.• Tuned query model, evaluate annotator performance and detect behavior (break, cheat or pretend to work) based on statistic analysis of group agreement and individual action series.• Developed an integrated survey platform for annotators to label and discuss.• Establish a comprehensive and detail-specified sets of Codebook, Gold-standard examples and survey with rounds of test, calibration and user feedback.
