PROJECT

Large-scale News Graph Mining

- extract cross-lingual name entities with Spacy , Polyglot, and Wikipedia concepts.
- recall, pre-rank, and rank similar news article pairs based on rules and active learning classifiers.
- predict large-scale news network structure with bi-directional index and transformer.
- validate social science theory hierarchy by comparing predictability of subjectively biased aspects.

Personalized Opinion Graph Time Series Learning

- Modeled the dynamics of opinions and personalities with probabilistic graph time series.
- Devised an extended EM algorithm for learning the graph time series and get competitive performance.
