## EXPERIENCE

University of Massachusetts, Amherst	2019.9 - present
Analyzed on a global news graph with trillions of pairs predicted by a fine-tuned transformer model.	
Developed a large dataset of multilingual news article pairs with human-in-the-loop active learning framework.	
Institute for Artificial Intelligence, Tsinghua University	2018.3 - 2018.9
Automatically traced heterogeneous science funding and corresponding scholars with name disambiguation.	
Central South University	2016.3 - 2017.7
Devised robust and efficient schemes for mobile body network, vehicular network, and wireless sensor network.	

## PROJECT

### Large-scale Multilingual News Graph Mining

- extract cross-lingual name entities with Spacy, Polyglot, and Wikipedia concepts.
- recall, pre-rank, and rank similar news article pairs based on rules and active learning classifiers.
- Infer global news network for trillions of pairs with refined multilingual transformer and bi-directional index.
- Draw social science (e.g. politics) findings based on temporal and geographic analysis on global news network.

### Personalized Opinion Graph Time Series Learning

- Modeled the dynamics of opinions and personalities with probabilistic graph time series.
- Devised an extended EM algorithm for learning the graph time series and get competitive performance.
