#### FEATURED PROJECT

### Agenda-setting

- Embeded multi-lingual news articles with sentence-bert neural network and ridge regression.
- Extracted name entities with Spacy and Polyglot; bridged multiligual name entities with Wikipedia concepts.
- Query, filter, and refine similar news article pairs in the large database based on similarity evaluation.
- Develop an integrated survey platform for annotators to label and discuss.
- Establish a comprehensive and detail-specificed sets of Codebook, Gold-standard examples and survey with rounds of test, calibration and user feedback.
- Tune query model, evaluate annotator performance and detect behavior (break, cheat or pretend to work) based on statistic analysis of group agreement and individual action series.
